

BORDERTEC BSR

PRODUCT DESCRIPTION

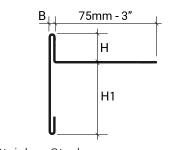

The bordertec BSR is recommended to contour marble and stone balconies and terraces with a water-run-off finishing element. Its reversible section allows to match two different tiles thicknesses with the same reversible profile. Bordertec BSR is equipped with the necessary accessories for a proper installation.

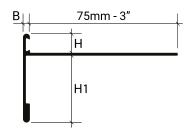

Bordertec BSR profiles are the ideal solution for elegantly and precisely defining the perimeter edges of marble and stone raised floors, and are also perfect for creating flawless steps. The exposed front of Bordertec BSR is designed to create a pleasing, modern aesthetic, creating a clear and sophisticated contrast between the painted vertical surface and the flooring. To ensure flawless installation, each Bordertec BSR profile comes with all the necessary accessories.

TECHNICAL FEATURES

Length: 2.70 meters - 8'10"

Stainless Steel B = 5/32" - 3.6 mm

Aluminum B = 5/32" - 3.6 mm

MATERIAL DESCRIPTION

Stainless Steel

Steel profiles are made by cold forming sheets of constant thickness, thus differing from the corresponding aluminum and brass versions made by hot extrusion, while maintaining their application and dimensional characteristics. Stainless steel effectively resists high mechanical stress and is particularly suitable for use in the chemical, food, and hospital sectors, where hygiene, durability, and chemical resistance are essential. Normally produced with a semi-gloss finish, a brushed finish can also be achieved by partially removing material using rotating nylon and quartz fiber brushes. This process gives the surface a matte appearance without altering its characteristics.

AISI 304 STAINLESS STEEL - EN X 5 CrNi 18 10 - DIN 1.4301:

This steel belongs to the AUSTENITIC category and is the most widespread and commonly used alloy for products requiring high technical and performance characteristics. It is highly resistant to most chemical agents but may stain or darken superficially; a standard polishing product is sufficient to restore its original appearance.

MATERIAL DESCRIPTION

Aluminum

The primary aluminum alloy EN AW-6060 in T6 temper is suitable for complex extrusions, offering high strength and an excellent natural surface finish that lends itself well to subsequent finishing processes.

POWDER COATED ALUMINUM:

Powder coating begins with a chromium phosphate pre-treatment, followed by electrostatic application of polyester powders that offer high resistance to U.V. rays and atmospheric agents. The entire surface of the profile is coated with an average thickness of approximately 60 microns. A hot cross-linking polymerization process is then carried out to ensure maximum chemical and mechanical resistance.

Floors, terraces and balconies

APPLICATION

- 1. Wählen Sie das Profil mit der H-Abmessung, die der Dicke der zu verlegenden Verkleidung entspricht, und achten Sie dabei unbedingt darauf, dass das Profil nicht über den Rand der Verkleidung hinausragt, sondern 0,5 bis 1 mm tiefer liegt.
- 2. Cut to the desired length;
- 3. Fix the profiles to the screed with nails, taking care to separate them by at least 1 cm from the screed and taking care to leave at least 3/16" 0.5 cm of space between adjacent profiles and mask that space with the joint;
- 4. Spread the adhesive in the profile application area with the help of a notched trowel;
- 5. Apply the desired waterproofing system (Balcotec System) where applicable;
- 6. Lay the flooring, taking care to leave a gap of about 5 mm between tile and profile.

Raised floors

APPLICATION

- 7. Cut the profile to the desired length;
- 8. Cut the bases of the Uptec support to ensure correct assembly of the perimeter profile;
- 9. Position the profile on the Uptec supports, possibly breaking the spacer tabs of the joints if they prevent the correct positioning of the profile, using the help of positioning a first tile;
- 10. Place the tiles on the UPTEC supports, making sure that the joints are always respected and following the Uptec system assembly instructions.

N.B.: Aluminum profiles offer limited resistance to alkaline substances, so their use must be evaluated according to the expected chemical aggressions. Aluminum profiles in contact with cementitious substances can be attacked by corrosion processes, so residues of used adhesives and sealants should be removed immediately. When laying, the right amount of adhesive must be used and the right drying times observed, avoiding creating cavities in which water can stagnate, which would lead to the formation of alkaline substances (aluminum hydroxide) and trigger corrosive electrolytic phenomena.

CLEANING AND MAINTENANCE

STAINLESS STEEL:

Stainless steel is easy to clean and very hygienic because of its smooth, nonporous surface, which hinders the growth of bacteria. To keep it in good condition, simply wash it with warm soapy water, rinse it thoroughly and dry it with a soft cloth. If exposed to weathering, periodic cleaning is recommended to prevent corrosion. Brushed surfaces should be cleaned in the direction of brushing. In case of scratches, a specific polish can be used with a soft cloth.

Avoid cleaning agents containing hydrochloric acid, hydrofluoric acid or bleach, as well as abrasive products. Do not leave ordinary steel objects in contact with stainless steel to prevent contamination and rust stains. Also, do not leave damp patches or sponges on the surface to prevent water halos.

ALUMINIUM:

Aluminum requires no special maintenance.

For cleaning, use colorless alcohol diluted in water or neutral detergents, avoiding acidic ones (e.g., hydrochloric or hydrofluoric acid); use non-abrasive sponges or cloths to avoid damage. We recommend not applying cleaners directly to surfaces. After cleaning, rinse with water and dry immediately with a soft cloth. Avoid polishes. Quickly remove residual cement or grout to protect the surface.

WARNINGS

These profiles should be handled with care, using cut-resistant gloves. The indications and prescriptions herein, while corresponding to our experience, are to be considered purely indicative and must be confirmed by exhaustive practical applications. Profilitec declines any responsibility for any damage to people or things resulting from improper use of the products. The user is required to determine whether or not the product is suitable for use and assumes all responsibility arising from incorrect installation of the material.

BILL OF QUANTITIES ITEM	
Supply and installation of a profile in	(material), with a
finish (see Material Des	cription section) with a characteristic measurement of
mm, equipped with a perforated support ba	ase that guarantees perfect grip with the adhesive used and, in the case of
installing raised floors, is a valid support for	the tiles arranged on the adjustable supports. Profile with a dovetail internal
part for better grip of the adhesive.	
Family typefrom	om the Profilitec company as a painted aluminium perimeter profile suitable
for installing both adhesived and floating ter	race and balcony flooring, to be supplied and installed properly, following the
methods and fields of application suggested	d by the manufacturer.
Profile length: 2700 mm
