

# coflex CE

**COFLEX CE** is a synthetic resin movement joint designed to subdivide large tile bays. The profile size is chosen according to the tile thickness and should remain 3/16" +/- 1/32" (5 +/- 1mm) below the floor elevation. The joint must be laid in correspondence with joints in the underlying substrate. Exclusively suitable for pedestrian traffic, this profile provides limited protection to the tile edges and compensates slight differential movement due to substrate contraction and expansion. Install with tile adhesive. Suggested floor bays: 172-7/32"ft<sup>2</sup> (16m<sup>2</sup>).

(CE 90\*)

### COFLEX CE-P\* Synthetic Resin

Durable PVC profiles with adequate resistance to corrosion. Suitable for indoor and outdoor applications.
