

multicover

The **MULTICOVER** line presents two more alternative transition and edge profiles for the CLG and CLF series, both in wood laminated aluminum. Available in two versions: self-adhesive and pre-drilled.

To install the self-adhesive version, make sure the base is solid, flat, level, clean and dry. Then simply remove the adhesive backing and press uniformly downwards on to the profile.

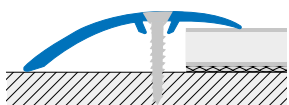

The melamine laminated aluminum profile is available in eight different finishes. The smoothly-embossed melamine is resistant to abrasion, easy to clean and blends easily with existing floors.

Installation of self-adhesive version:

- 1) Make sure the base is solid, flat, level, clean and dry.
- 2) Cut the profile to the desired length and remove adhesive backing.
- 3) Press uniformly downwards on to the profile to apply. Do not hammer.

Installation of the pre-drilled version:

- 1) Cut the profile to the desired length and mark the position of the pre-drilled holes.
- 2) Fasten with flathead screws.

MULTICOVER CLG 370* Wood Laminate Aluminum

Decorative profiles for same-height transitions.

	B = in	mm	Finish	Adhesive		Drilled
