

STAIRTEC SWP is an innovative stainless steel button part of the SWR series. Its 3/16" (5mm) protruding shape makes this element highly visible, ideal for staircases and marked walkways. The grooved button shank provides adhesive grip. Installation and assembly can be made on or off-site.

To install on wood flooring, simply drill a 1/4" (6.5mm) hole and hammer the button in place. The buttons should be spaced 2-3/4" (70mm) on center.

To install on natural stone or ceramic tile flooring, simply drill a 9/32" (7mm) hole and fasten the button with the appropriate adhesive. The buttons should be spaced 2-3/4" (70mm) on center.
