

The **WOODTEC LP** profiles are specifically designed for finishing the perimeter of floating wood floors. The pointed, sloping shape of this profile ideally transitions to existing flooring or floors at lower elevations. The internal gap acts allows for differential movement. Installed with flathead screws.

**WOODTEC LP-OLN Polished Brass**

Due to its unique shape and the intrinsic qualities of the material, this brass profile guarantees resistance to chemical and mechanical stress and wear. It is suitable for elegant interior detailing. Moisture and corrosive agents may oxidize the exposed surfaces. Buffing the profile with conventional polisher will bring back its shine in no time.

**WOODTEC LP-ILN Polished Stainless Steel**

Offering excellent resistance to mechanical impact, this profile is ideal for industrial and commercial heavy-traffic areas.
